

**Jean-François LASCOURRÈGES** is project manager at the APESA's Technical Platform. He received in 1996 his PhD in Environmental Microbiology at University of Bordeaux. He achieved two years postdoctoral at IRB (Montreal, Canada) before integrating APESA. He first worked on the natural attenuation of pollution in anaerobic conditions then was interested in bioassays for the assessment of the ecotoxicological impact on contaminated soils. Now, he manages pilot scale experiments in methanisation for industrial customers with focus on the digestate quality. He is (co-) author of about 10 refereed journal publications.
